Super Admin / Developer – Features to Build

S. No.	Feature / Module	What Super Admin / Developer Does (D)
1	Login	Manage own login; create first admin account for each institution (initial bootstrap).
2	Forgot Password	Use for own account recovery; verify flow works across institutions.
3	Reset Password	Reset own password, test password reset policies and flows.
4	Change Password	Change own password; validate password strength rules globally.
5	Logout (confirm screen)	Use for own sessions; verify logout UX and security behaviour.
6	Active Sessions / Devices	View/revoke own sessions; test device/session security behaviour across tenants.
7	Student Profile	View for debugging, impersonation tools, or data checks (if you allow elevated read access).
8	Parent Profile	Same as Student Profile, mainly for debugging and support.
9	Teacher Profile	View to debug role/permissions and mapping (optional edit through admin-level tools).
10	Admin Profile	View/edit when creating or maintaining primary admins for institutions.

11	Developer Profile	Manage own developer account details and security settings.
12	Virtual ID (QR / Face)	Configure ID generation logic, formats, and institution branding mapping.
13	Profile Edit	Adjust profile defaults, enforce validation rules (name formats, required fields).
14	Role List	Design and maintain global default role templates for institutions.
15	Assign Role	Configure allowed role mappings and defaults; may assist institutions in special cases.
16	Permission Matrix	Define and update global permission matrix per role/module.
17	Role Change History	Audit and debug role changes across institutions.
18	Privacy Settings	Set global privacy defaults applied when new institutions/users are created.
19	Biometric Consent	Configure consent text, storage rules, and default behaviour.
20	Data Download Request	Define global retention/export policies, approve or simulate edge-case exports for QA.
21	Student Attendance Dashboard	Use read-only to validate AI attendance behaviour and analytics outputs.
22	Class Attendance Dashboard	Use for monitoring algorithm performance and anomaly patterns across classes.

23	Attendance Detail per Student	Drill down when debugging AI attendance or support escalations.
24	Face Enrollment	Configure and monitor face enrollment flows and thresholds.
25	Flagged Attendance List	Review flagged cases to tune AI thresholds and rules.
26	Attendance Override Requests	Analyze override patterns to improve models and rules.
27	CCTV Live View (admin)	Set up and test CCTV integration per institution (stream endpoints, auth).
28	Kiosk List	Configure and verify kiosk registrations for multiple institutions.
29	Kiosk Settings	Define default kiosk rules, heartbeat/health checks, and integration settings.
30	Attendance Policy	Define global max/min boundaries for policies (e.g., grace limits, AI constraints).
31	Holiday / No-Class Setup	Provide global templates (national holidays, exam windows) institutions can import.
32	Attendance Alert Settings	Set global defaults for when alerts trigger and what channels are available.
33	Attendance Notification Log	Monitor large-scale alert delivery, failures, and spam/abuse patterns.
34	My Timetable (Student)	Test end-user view behaviour across institutions; ensure algorithm outputs render correctly.

35	My Timetable (Teacher)	Same as above, focusing on staff-side timetable UX and correctness.
36	Class Timetable View	Validate generated timetables and conflict resolution results.
37	Timetable Generator	Tune timetable algorithm parameters and performance; enable advanced features.
38	Timetable Conflict Resolver	Configure conflict resolution rules and priority weights.
39	Timetable Change History	Audit large-scale timetable changes, rollbacks, and rollback tooling.
40	Institution Calendar	View for high-level monitoring; provide default country/board academic templates.
41	My Calendar	Test personal calendar sync and cross-integration (events, exams, homework).
42	Event Details	Inspect and debug event structures across tenants; enforce field standards.
43	Event Management	Optionally assist institutions or run platform-wide events or notices.
44	Fee Plan Setup	Ensure fee structures support required patterns; configure system-wide constraints.
45	Invoice List	Inspect invoice generation logic and failure cases across institutions.
46	Fee Waiver / Scholarship	Set rules/limits on waivers if handled globally; audit institutional practices.

47	Fee Due List	Observe overall dues behaviour, detect anomalies or abuse (e.g., misconfigurations).
48	Fee Payment Home	Test end-to-end fee payment UX and funnel health.
49	Payment Methods	Configure which gateways/methods are available per institution or geography.
50	Payment Confirmation	Verify confirmation and callback flows per payment gateway.
51	Receipt Download	Check receipt templates, legal text, and branding per institution.
52	Transaction History (Student/Parent)	Inspect sample histories for debugging gateway issues and disputes.
53	Online Transactions List (Admin)	Analyze system-wide error codes and payment success rates.
54	Manual Payment Entry	Verify data consistency and rules when admins use manual entries.
55	Failed Transactions & Retry	Monitor and tune retry logic and messaging.
56	Refund Management	Ensure refund policies, flows, and audit logs are correct; debug refunds.
57	My Courses	Test student-side course enrolment and visibility across institutions.
58	Course Detail	Verify course metadata, mapping to analytics and AI helpers.
59	Lessons & Topics	Ensure content structure works with

		storage limits and LMS features.
60	Resources / Handouts	Manage global storage/size limits; test content delivery performance.
61	Assignment List (Student)	Validate assignment visibility and status logic; test across institutions.
62	Assignment List (Teacher)	Verify teacher assignment workflows and performance on large datasets.
63	Assignment Detail	Debug issues around grading, attachments, or AI helper restrictions.
64	Submit Assignment	Test file upload constraints, anti-cheat, and storage implications.
65	Grade & Feedback (Teacher)	Verify grade publishing rules and feedback structures for analytics.
66	Homework List	Check homework generation, calendars, and cross-links with AI helper.
67	AI Homework Helper	Integrate AI models, configure guardrails, and monitor usage.
68	AI Explanation View	Tune explanation depth, allowed hints, and safety filters.
69	Homework Progress	Ensure data pipelines from submissions to progress analytics are correct.
70	Ask Assistant (Chatbot)	Configure chatbot intents, flows, and access to knowledge base.
71	Chat History	Inspect anonymized logs to improve intents and safety.

72	Escalate to Human Support	Configure escalation routing and thresholds globally.
73	Exam Calendar	Validate exam calendar behaviours and alignment with institution calendars.
74	Exam Timetable	Check exam timetable rules, clash detection, and rendering.
75	Exam Setup	Define system-wide allowed exam types, grading schemes, and constraints.
76	Hall Ticket (optional)	Configure hall ticket templates, security features (QR, watermark).
77	Marks Entry	Verify performance and safety (locks, audit) for large-scale marks entry.
78	Result Verification (HOD)	Ensure workflow rules and locks are consistent across institutions.
79	Publish Results	Control global rules on when/how results can be published and accessed.
80	Student Result Card	Design default result card templates and export formats.
81	Practice Tests List	Govern availability of AI practice engine per board/grade.
82	Start AI Test	Configure AI test generation and delivery pipelines.
83	Test Result & Analysis	Tune analytics and reporting dimensions for AI tests.
84	Teacher Test Request	Define limits/rules on generation requests (e.g., quota, difficulty).

85	Student Analytics (self view)	Validate what insights students see, ensuring privacy and fairness rules.
86	Class Analytics	Configure class-level metrics and at-risk indicators.
87	Department Analytics	Tune department-level dashboards and alerts.
88	Institution Analytics	Design institution-level KPIs and performance summaries.
89	At-Risk Students List	Configure detection models, thresholds, and review mechanisms.
90	Feed (Noticeboard Timeline)	Define global categories and moderation tools for posts.
91	Announcements List	Ensure announcement types and lifecycles are consistent platform-wide.
92	Notice Details	Configure allowed attachments, visibility scopes, and retention.
93	Create / Schedule Notice	Set defaults and rate limits; monitor abuse.
94	Messages Inbox	Validate messaging constraints (who can message whom) and spam controls.
95	Messages Outbox	Monitor for spam/abuse patterns across institutions.
96	Class Channel	Configure class-channel defaults and limits; test scale behaviour.
97	Parent–Teacher Chat	Configure safe-communication policies and logging.

98	PTM Scheduler	Tune PTM slot rules and capacity defaults.
99	PTM Slot Booking	Validate booking behaviour and fairness (first-come limits, conflicts).
100	PTM Summary / Notes	Set data retention/visibility policies for PTM notes.
101	Clubs Directory	Configure global categories/tags for clubs and visibility rules.
102	My Clubs	Test club join/leave flows across institutions.
103	Club Detail	Ensure club metadata aligns with analytics and safety guidelines.
104	Co-Curricular Calendar	Validate cross-sync with institution calendar and attendance rules.
105	Club Admin Page	Configure what powers club admins have by default.
106	Tools Home	Provide curated shortcuts to platform-level admin/developer tools.
107	Submit Feedback	Configure categories and routing of feedback to helpdesk/owners.
108	Feedback List (Teacher/Admin)	Inspect feedback patterns across institutions for product decisions.
109	Feedback Analytics	Design feedback analytics dashboards and sentiment metrics.
110	Create Ticket (Helpdesk)	Raise or auto-create platform-level tickets; configure ticket forms.

111	Ticket Status	Monitor platform-level ticket queues and SLAs.
112	FAQ / Knowledge Base	Manage global KB articles for all institutions.
113	Contact Support	Configure support contact options and routing rules.
114	Notification List	Inspect notifications flowing through global providers.
115	Notification Settings	Configure global channel availability and defaults.
116	Notification Template Management	Create and manage system-wide notification templates (SMS, email, push).
117	User Activity Log (per user)	View any user's activity log when debugging or auditing (subject to strict internal policy).
118	System Audit Log (admin)	View system-wide audits, filter by institution, module, or action type.
119	Institution List (Developer)	Create, view, and manage all institutions on the platform.
120	Institution Detail & Settings	Configure institution-specific settings, branding, modules, and integrations.
121	License & Limits	Set license plans, seat limits, feature toggles per institution.
122	Data Backup / Export	Configure and trigger backups, exports, and data-retention policies per institution/region.
