First Team Meeting – May 10, 2026

Team Introduction Session

Welcome everyone to our first official team gathering. Today marks the beginning of an exciting journey where we'll introduce ourselves, share our expertise, and align on our collective vision. This session is designed to help us understand each other's strengths, working styles, and how we can best collaborate to achieve our goals.

About Me

N. Pavan Krishna

ML & Backend Developer

I am currently pursuing B.Tech in Computer Science with specialization in Artificial Intelligence and Machine Learning at Sphoorthy Engineering College. I'm interested in AI and backend development, and I enjoy learning through projects and practical work. I like exploring new technologies, solving real life problems.

Key interests:

- Machine learning & AI
- Backend Development
- System Design

Skills & Expertise

Technical skills and areas that I am continuously learning and improving through projects, collaboration, and practical experience

AI & Machine Learning

Worked on machine learning and deep learning based projects including anomaly detection, prediction systems, and computer vision applications.

Backend Engineering

Currently contributing to backend development within the team and learning how scalable systems and APIs work in real-world applications.

AI Tools & Platforms

Familiar with modern AI tools and workflows including ChatGPT, Claude, and Antigravity for research, development support, brainstorming, and productivity.

Frontend Development

Learned frontend fundamentals and Angular during internship experience, along with basic Flutter development.

Database Systems

Worked with MongoDB and gained basic understanding of database design and backend data handling during internship experience.

Professional Experience

Key roles and projects that have shaped my technical journey and prepared me for this opportunity.

Current Role : Software Developer Intern

Company : Inncircles

Working as a Software Developer Intern and gaining practical experience in backend and frontend development. Learning and working with technologies like Angular and MongoDB while understanding real-world development workflows, collaboration, and project structure.

Key Achievements

Practical experiences and technical learning that helped me improve problem-solving, development skills, and teamwork.

Software Development Internship

Gaining practical development experience as a Software Developer Intern at Inncircles while working with technologies like Angular and MongoDB.

AI & ML Project Development

Built and worked on projects related to computer vision, anomaly detection, and machine learning applications.

Learning & Working Style

Daily Routine

Like learning consistently through practical work, projects, and regular practice.

Focus Style

Comfortable working under pressure and able to stay focused even in fast-paced or noisy environments.

Collaboration Mode

Prefer working in team environments where ideas and feedback can be shared openly.

Communication Style

Prefer clear and respectful communication while working with teams.

Vision & Contribution

What I Want to Build

I want to work on practical and useful technology solutions that can solve real-world problems and create meaningful impact.

How I Plan to Contribute

- Backend Development
- Machine Learning
- Team Collaboration & Problem Solving
